Desolate Landscapes: Ice-Age Settlement in Eastern Europe (Rutgers Series in Human Evolution)

John F. Hoffecker

The ability of modern humans to colonise the regions of northern Eurasia, something which Neanderthals had failed to do, was a major step forward in the evolutionary development of man. Attributed to a behavioural transformation, the ability to develop new technologies and organisational skills meant that they were able to adapt to harsher, colder environments. This authoritative study which collates and discusses much Russian research, presents an overview of the Pleistocene in eastern Europe within the context of human evolution. John Hoffecker assesses the success of modern humans, explains how this success was achieved and outlines the evidence that supports his argument. A useful and much needed synthesis of human development in Eastern Europe.
